Move the Solution, Not the Problem

Completed Project-Home Heating Oil Remediation - Margate, New Jersey

Contamination from heating oil UST extended from 4 feet below grade to 7 feet below grade and under the neighbor's Driveway. The initial treatment was directed just above the groundwater ~ 4' through seven (7) injection points. A sheen of oil kept returning even after a 2nd injection round. There was no evidence of offsite contamination, nor a source on the property.

During the installation of injection point, CRLLC evaluated the subsurface via hand auguring and found a 6" layer of meadow mat (which had not been previously identified), saturated with oil. The injections were conducted into this mat and reached standards 30 days later.
