Move the Solution, Not the Problem

Completed Project-Home Heating Oil Remediation - Pleasantville, New Jersey

Contamination from heating oil UST extended from 7.5 feet below grade to 26 feet below grade. Groundwater was not detected to 35 feet below grade so only the contaminated soil was to be treated to below 10,000 ppm TPH. Injections were performed from 6 feet below grade to 26 feet below grade, with 10 % Nano Peroxide to insure a complete flooding of the sandy soil was accomplished.

Analytical results @ 30 days showed only one sample @ 10,000 ppm. Analytical results @ 60 days show all results below Standard 10,000 DRO.
